Dear Hiring Manager,

I'm excited to apply for the Software Engineer positions (Full stack, DevOps) role.

With solid experience in cloud infrastructure, system administration, and full-stack development, I'm confident I can contribute effectively to your team.

At Otherhome Pty Ltd, I primarily managed a cloud computing-based server system for an in-house messenger application while balancing performance and cost efficiency.

I utilized AWS within the free tier for development servers and deployed production servers on Vultr, which provided more cost-effective cloud solutions. This approach allowed me to optimize infrastructure for both development and production environments while keeping costs manageable.

I also designed and implemented a CI/CD pipeline for a LAMP stack-based community website for Korean immigrants, which I developed and that has over 200,000 visitors.

In system administration, I've worked with both Windows and Linux environments, managing Microsoft 365 and other essential infrastructure. I built the company's email system, developed its main website and ticketing platform using WordPress, and improved customer communication.

Additionally, I created iOS and Android apps for our in-house messenger, ensuring they complied with app store policies and performed well across different devices. I also mentored students as a Teaching Assistant at 2U/EDX, helping them develop full-stack skills.

I'm eager to bring this experience and support your IT systems to help achieve your goals.

Sincerely,

Kayden Kim
